KULDEEP JANGID

AI/ML & PYTHON DEVELOPER INTERN

CONTACT:

- Jaipur, Rajasthan
- +91-9166292611
- KuldeepJangid2008@gmail.com
- Portfolio: kuldeep-codes.me
- GitHub: github.com/kuldeep-space
- LinkedIn: linkedin.com/in/kuldeep-space

TECHNICAL SKILLS:

Programming

- Python, C++, C, SQL, JavaScript

AI, Data & APIs

- OpenCV, NumPy, Pandas, data preprocessing, data analytics, Python Requests, REST APIs, prompt engineering, LLM APIs, scikit-learn

Computer Science

- Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), algorithm optimization, analytical problem-solving

Web & Tools

- React.js, HTML5, CSS3, Firebase, Git, GitHub, Linux, Jupyter Notebook, VS Code

EDUCATION:

B.Tech, Computer Science and Engineering

Jaipur Engineering College, Rajasthan — Expected May 2028

CBSE Class XII

Kendriya Vidyalaya, Jalore — 2024

PROFESSIONAL SUMMARY:

Computer Science undergraduate and Python developer with hands-on experience in Python, NumPy, Pandas, OpenCV, SQL, and C++. Builds practical computer-vision, student-analytics, and data-driven applications. Experienced in DSA mentoring, data preprocessing, algorithmic problem-solving, and REST API integration. Seeking to contribute to Python development, data analytics, and applied AI/ML projects.

EXPERIENCE:

DSA Mentor

Coder's Cafe
Sep 2025 – Aug 2026

- Guided 7–10 coding exercises per week, providing structured DSA practice and targeted debugging support.
- Mentored students in analytical problem-solving, algorithm optimization, and clean Python/C++ implementations.
- Conducted workshops on programming fundamentals, core data structures, and modular coding practices.

Python with Data Analytics Intern

Learn and Build
21-Day Intensive Program

- Completed practical training in Python programming and data-analytics workflows.
- Used NumPy and Pandas for data handling, manipulation, and analytical problem-solving.

PROJECTS:

Automated Face-Detection Attendance System

Python, OpenCV

- Developed a real-time computer-vision application for face detection and identity recognition.
- Implemented camera-based attendance logging to reduce manual recording and simplify attendance tracking.

EduShield AI – Student Analytics Platform

Hack AryaVerse, 24-Hour Hackathon

- Built an AI-oriented student analytics platform to generate educational insights from student metrics.
- Designed data-processing and analytical workflows to support data-driven decision-making.

ACHIEVEMENTS & CERTIFICATIONS:

- LeetCode: Solved 189 unique algorithmic problems (verify count and language-wise breakdown before submitting).
- Hack AryaVerse: Developed and pitched EduShield AI during a 24-hour hackathon.
- Shankara Global Hackathon 2025: Participated in a 24-hour innovation and startup challenge.
- Python Programming Certification, Learn and Build: 45-hour course, Grade A.
- Linux System Certification, Learn and Build: 40-hour program.

Python Train Search Engine

Python

- Built a search and filtering application for structured train datasets using custom user criteria.
- Improved search logic and data handling to return relevant results efficiently.

Textify – Text Processing & Analytics Utility

React.js, JavaScript, HTML, CSS

- Built a responsive text utility for case conversion, text formatting, and real-time document metrics.
- Implemented character, word, sentence, and line counters for quick text analysis.
